

# ASPHERICAL CYLINDRICAL LENS

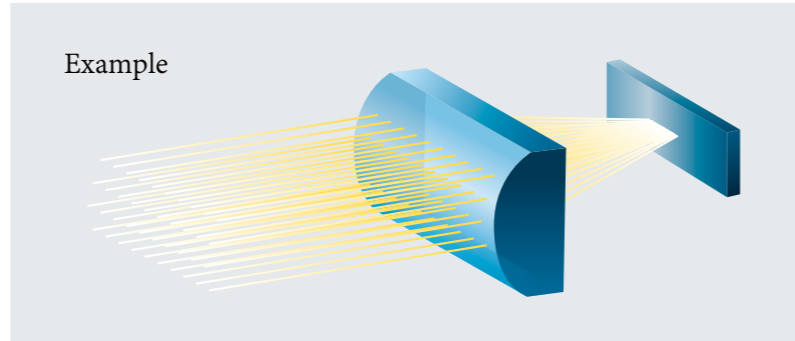

We have successfully manufactured an aspheric cylindrical lens with precision die, which had been difficult to produce by grinding methods in the past.

There are few individual differences of producing with molding tools, which has made possible, mass production.

## Applications

- Laser line generator
- Correction for elliptic beam from laser diode
- Light condensing for line sensor

Example

## Sample Specifications

Dimension	5mmx15mm
Center Thickness	3mm
Focal Length	6.0mm
Curvature Radius (Aspherical)	3.09mm
PV Error	P-V=<1 $\mu$ m
